

DREAM SHIELD ADVANTAGES COMPARED TO CONVENTIONAL SHIELDING

Material: Aramid and steel

Material: ultra light weight composite

- 30% lighter
- 70% fewer joints = greater security
- Preformed in molds, not on the vehicle
- Better structural integrity and fit
- Does not generate noises
- Does not require cutting the vehicle
- Lower costs of operation and maintenance
- Waterproofed for longer life
- Does not produce mold or odors
- Weight will not raise cost of registration fees

We are the antidote to fear.

This ultra light weight bullet resistant system is manufactured in molds developed exclusively for Dream Shield in cooperation with LATAM armoring companies with over thirty years of armor manufacturing; this system is accomplished by pre-forming and making the panels sized for each vehicle. Due to their physical conditions, the panels allow manipulation during installation and therefore may be properly adjusted to the vehicle's characteristics without ever being welded.
